

Machine Learning & AI for Executives

Join us for an intensive seminar and workshop on the leadership role in effective machine learning and artificial intelligence.

Overview

Artificial intelligence (AI) is revolutionizing competitive dynamics across industries. Those who do not choose to lead in this new environment will be left behind. Yet business leaders still search for where to begin. What projects will be most impactful? What are reasonable expectations for AI system? What organization structures are most effective? This seminar provides focused, action-oriented thinking and discussion on these critical issues.

What to expect: You will leave this course able to identify top AI opportunities, with an understanding of key AI success factors, and with a clearly defined project ready for your team to execute.

Who should attend: Executive leaders seeking to initiate or improve the performance of machine learning initiatives and AI projects. There are no prerequisites.

“Companies will be valued not just on their big data, but on the algorithms that turn that data into actions and impact customers.”

— Gartner Research

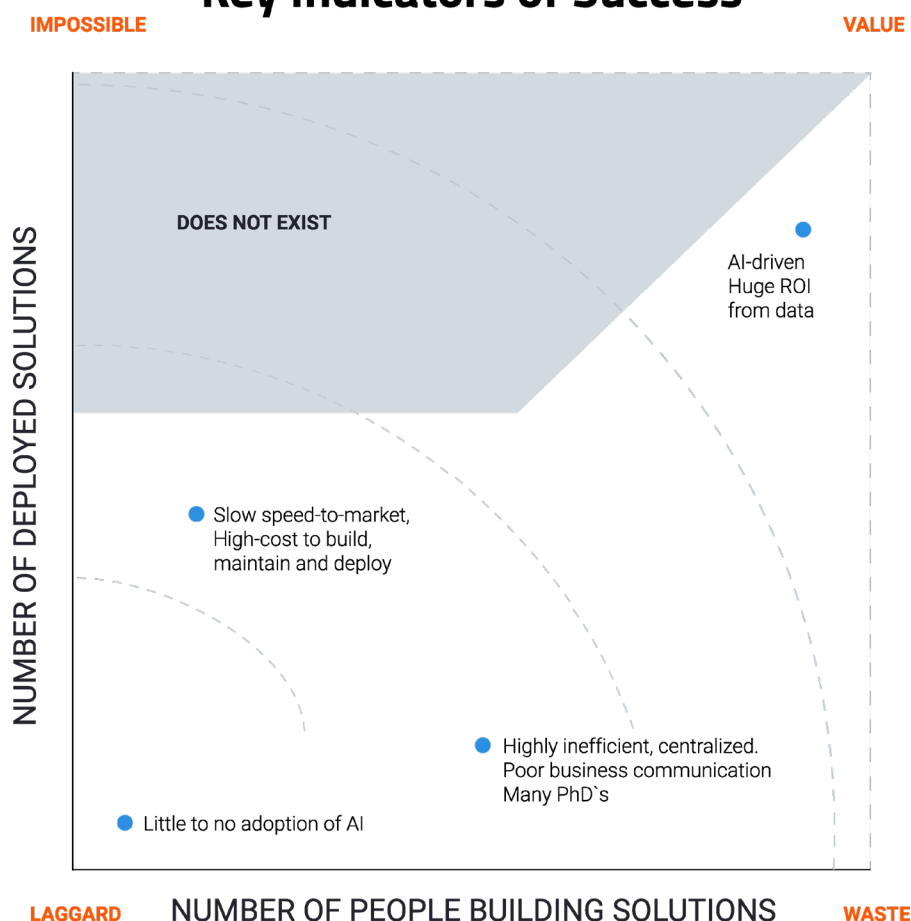

“AI will generate \$2.9 trillion in business value and recover 6.2 billion hours of worker productivity by 2021.”

— Gartner Research

“AI-driven companies will take \$1.2 trillion from competitors by 2020.”

— Forrester Research

Key Indicators of Success

Detailed Agenda

Part One- Key Terms and Concepts (90 minutes):

- Foundations
- Competing on AI
- Basic definitions
- Key Terminology
- Hype vs Reality
- Why do they call it machine learning?
- Why do they call it AI?
- The structure of Machine Learning & AI
- What a model can do for you
- Success stories and case studies
- Making big data have a big impact
- Value creation through AI
- The machine learning lineup
- Increasing speed-to-market
- The data science technology landscape

How to spot a problem you can (and can't) solve with AI

- Finding problems you can solve
- Converting business problems into AI opportunities
- Democratizing data science
- Value estimation
- Action orientation
- KPIs vs prediction targets
- Evaluating and prioritizing

Putting AI into action

- Thinking about implementation
- Effective execution
- Organizational design
- Pros and cons of centralization
- Creating an AI roadmap
- Qualities of a good use case

Common blockers and next steps

- Focused resources
- Executive sponsorship
- Dealing with detractors
- Model governance
- Regulatory constraints
- Resistance to change
- Data Management

Part Two - Planning for Action (90 minutes):

The AI Opportunity Worksheet

- Defining the problem
- Value estimation
- The prediction target
- Prediction features
- Implementation considerations
- Key staff
- Round table discussion

“Companies have to race to build AI or they will be made uncompetitive. Essentially, if your competitor is racing to build AI, they will crush you.”

— Elon Musk
